

Alexander Lisak

DevOps Engineer

Crawley, UK · 07531 953527 · alexlisak@hotmail.com

[LinkedIn](#) · [GitHub](#)

Professional Summary

Results-driven DevOps Engineer with a strong foundation in Java development and over three years' experience automating infrastructure, optimising CI/CD pipelines, and delivering reliable hybrid-cloud solutions.

Proficient in Jenkins, Ansible and Docker with hands-on experience implementing Infrastructure as Code (IaC), container orchestration, and release automation.

Adept at collaborating across development and operations teams to achieve secure, scalable, and resilient software delivery.

Technical Proficiency

- CI/CD & Automation: Jenkins, Groovy Pipelines, Git, Ansible
- Infrastructure as Code (IaC): Ansible, Declarative configuration management
- Programming & Scripting: Python, Groovy, Java, PHP
- Version Control & Build Tools: Git, Maven, Swagger
- Operating system: Linux, Windows
- Security & Governance: IAM principles, Secrets management, Release compliance and governance
- Monitoring: Grafana and Prometheus
- Soft Skills: Collaboration, Problem-solving, Communication, Continuous improvement

Professional Experience

DevOps Technician (DevOps Engineer)

TotalEnergies Gas & Power · Tadworth, UK

Feb 2024 – Present

- Designed and optimized Jenkins CI/CD pipelines (Groovy scripting) to automate build, test, and deployment workflows, reducing manual effort and improving release velocity and system reliability.

- Implemented Infrastructure as Code (IaC) using Ansible to provision and configure environments consistently, eliminating configuration drift and enabling repeatable, automated deployments across development, staging, and production.
- Developed a Python-based encryption module integrated into Jenkins pipelines, ensuring all credentials and sensitive data are securely encrypted during deployment processes, enhancing security posture and compliance with best practices.
- Identified and resolved SQL injection vulnerabilities in a legacy PHP-based website through code review, secure coding fixes, input validation, and parameterized queries, mitigating high-risk security exposure and preventing potential data breaches.
- Collaborated closely with development and operations teams to troubleshoot and resolve production incidents, including a critical deployment issue where contributions to debugging and resolution minimized downtime and restored service quickly.
- Automated repetitive operational tasks and release coordination processes using Python scripting and Git version control, streamlining workflows and reducing deployment errors.
- Maintained and improved Git branching strategies and repository hygiene, supporting smooth collaboration, code reviews, and rollback capabilities in a multi-developer environment.
- Monitored pipeline performance and system health (tools like Jenkins logs, basic alerting, Grafana and Prometheus), identifying bottlenecks and implementing optimizations that contributed to faster feedback loops and higher deployment success rates.
- Contributed to DevSecOps initiatives by integrating security checks early in the pipeline (e.g., credential handling, vulnerability awareness), aligning with shift-left security principles and reducing risk in production environments.

Release Coordinator

Oct 2020 – Jan 2024

- Owned enterprise release calendars and coordinated multi-team cutovers across DevOps, DBA, and Infrastructure.
- Standardised release governance processes, improving visibility and compliance across environments.
- Enhanced accuracy of release notes and streamlined approval workflows for production deployments.
- Collaborated cross-functionally to implement release automation improvements and increase delivery confidence.

Ecommerce Engineer (DevOps Engineer)

Oct 2019 – Sep 2020

- Built CI/CD pipelines with Jenkins and Groovy to automate deployments and integration testing.

- Automated server provisioning and configuration via Ansible, reducing manual deployment errors.
- Strengthened release reliability through early-stage automation initiatives and cloud-based integration testing.

Java Developer

Esure Group plc · Reigate, UK

Aug 2017 – Jun 2019

- Developed RESTful microservices using Spring Boot and Java 8, integrated via Travis CI and deployed on AWS.
- Researched and prototyped migration paths to microservice architecture, improving scalability and fault isolation.
- Delivered core backend components for Motor Pricing Orchestration and Midterm Adjustment (MTA) systems.
- Applied Agile/Scrum methodologies and continuous integration practices within cross-functional teams.

Software Engineer

Sabre Insurance Group · Dorking, UK

Nov 2016 - Apr 2017

- As a Software Engineer I play a vital role in the company's Business Systems team, where the focus is on the backbone of the organization: its internal software infrastructure.
- I utilized the .NET ecosystem (C#, ASP.NET Core) to build robust, scalable services. My work involved writing clean, maintainable code to handle high-volume data transactions typical of the insurance industry.

Education

Bachelor of Science (Hons) in Computing and Information Technology

The Open University · 2011 – 2015 · 2:2

Relevant Modules: Cloud Computing & Virtualization, Software Engineering & Automation, Java Development

Final Year Project:

E-Commerce Website Development using Java EE, JSP, and MySQL — role: Lead Developer
